Hair Dryer

Category: **Beauty, Wellness & Fitness** Type: **Full SOP** Priority: **High** 6 labs

Covers these lab items: Blow dryer; Hair Dryer; Hand held dryer and attachments

What it is used for

A hair dryer uses heated airflow to dry hair and support basic hair styling. Correct heat settings, safe distance, and electrical precautions help prevent burns, hair damage, and electric shock.

Main parts

- Motor drives the fan that produces airflow.
- Heating element warms the passing air.
- Air inlet allows air to enter the dryer.
- Air outlet directs heated airflow toward the hair.
- Handle provides a secure grip during use.
- Control switches adjust heat and airflow settings.
- Concentrator or diffuser attachment shapes airflow on compatible models.

Before you start

1. Read the manufacturer's instructions and select a dryer suitable for the task.
2. Inspect the body, plug, power cord, switches, and attachments for damage.
3. Ensure hands and hair are not excessively wet before handling the electrical appliance.
4. Use the dryer in a dry, well-ventilated area away from water.
5. Remove tangled hair and loose objects from the air inlet and outlet.
6. Select the appropriate attachment and check that it fits securely.

How to use

1. Plug the dryer into a suitable outlet with dry hands.
2. Select a low or moderate heat setting suitable for the hair type.
3. Switch on the dryer and keep the outlet a safe distance from the scalp.
4. Move the dryer continuously rather than directing heat at one spot for too long.
5. Use a concentrator or diffuser only as intended by the manufacturer.
6. Keep hair and fingers away from the air inlet to prevent entanglement.
7. Reduce heat or switch to cool airflow when appropriate.
8. Switch off the dryer before removing or changing attachments.
9. Unplug the dryer after use and allow it to cool on a safe surface.
10. Clean the air inlet filter when cool and store the dryer in a dry place.

⚠ Safety

- Never use the dryer near a bath, sink, or standing water.
- Do not touch the plug or switch with wet hands.
- Keep the air inlet clear and away from hair, fabric, and other objects.
- Stop using the dryer if it smells burnt, sparks, or overheats.
- Do not use an appliance with damaged wiring or a loose attachment.
- Keep the hot outlet away from skin, eyes, and flammable materials.

Care & storage

- Unplug the dryer and allow it to cool before cleaning.
- Remove lint from the air inlet according to the manufacturer's instructions.
- Inspect the cord, plug, housing, and attachments regularly for damage.
- Store the cooled dryer with its cord loosely arranged in a dry place.

Common mistakes to avoid

- Using the dryer near water or with wet hands.
- Holding the hot airflow in one place for too long.
- Blocking the air inlet with hair or fabric.
- Wrapping the cord tightly around the dryer while it is still hot.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
