Curling Iron

Category: **Beauty, Wellness & Fitness** Type: **Full SOP** Priority: **High** 4 labs

Covers these lab items: Curling Iron

What it is used for

A curling iron uses controlled heat to shape hair into curls or waves. Correct temperature selection, careful handling, and proper cleaning help achieve consistent styling while reducing burns and hair damage.

Main parts

- Heated barrel transfers heat to the hair.
- Clamp holds hair against the barrel on clamp-style models.
- Handle provides a grip and helps keep hands away from the heated barrel.
- Temperature control adjusts the heat setting.
- Power cord and plug supply electrical power.
- Indicator light or display shows heating status on equipped models.
- Safety stand or heat-resistant rest supports the hot tool.
- Cool tip provides a designated area for handling on applicable models.

Before you start

1. Read the manufacturer's instructions and identify the available temperature settings.
2. Inspect the power cord, plug, barrel, clamp, and handle for damage.
3. Ensure hair is dry unless the tool is specifically designed for damp hair.
4. Remove tangles and divide hair into manageable sections.
5. Place the tool on a stable, heat-resistant surface near a suitable power outlet.
6. Keep suitable heat-resistant gloves and a heat-safe resting surface available.

How to use

1. Place the curling iron on its heat-resistant stand before switching it on.
2. Connect it to a suitable power outlet and select the appropriate temperature.
3. Wait until the tool reaches the selected temperature, following the indicator or manual.
4. Take a small section of hair and position it carefully near the barrel.
5. Wrap or clamp the hair according to the tool design, keeping the barrel away from the scalp and skin.
6. Hold the hair only for the recommended time and release it gently.
7. Repeat with other sections, avoiding repeated heating of the same section.
8. Switch off and unplug the curling iron immediately after styling.
9. Place the tool on a heat-resistant surface and allow it to cool completely.
10. Clean the cooled barrel as instructed and store the tool safely.

⚠ Safety

- Never touch the heated barrel or leave the hot tool unattended.
- Keep the curling iron away from water, sinks, and wet surfaces.
- Do not use a tool with a damaged cord, plug, or casing.
- Avoid direct contact between the heated barrel and scalp, ears, neck, or fingers.
- Use the lowest effective temperature suitable for the hair type and condition.
- Unplug the tool before cleaning and allow it to cool before storage.

Care & storage

- Clean styling product residue from the cooled barrel using approved materials.
- Check the cord, plug, clamp, and temperature controls regularly.
- Do not wrap the power cord tightly around the hot tool.
- Store the fully cooled curling iron in a dry, safe location.

Common mistakes to avoid

- Using excessive heat for the hair type or condition.
- Holding hair against the barrel longer than recommended.
- Using the curling iron near water or with wet hands.
- Storing the tool before it has cooled completely.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
