Dough Sheeter

Category: **Food Processing & Kitchen** Type: **Full SOP** Priority: **High** 3 labs

Covers these lab items: Dough sheeter; Sheeter / Cutter

What it is used for

A dough sheeter rolls dough into a uniform thickness for baking, pastry, and other food preparation tasks. Correct adjustment, hygienic handling, and safe operation help produce consistent sheets while reducing contamination and injury risks.

Main parts

- Rollers flatten dough to the selected thickness.
- Thickness adjustment sets the gap between rollers.
- Feed tray supports dough as it enters the machine.
- Conveyor belt moves dough through the rollers where fitted.
- Cutting attachment cuts dough into required shapes where fitted.
- Drive motor powers the rollers on powered models.
- Control switch starts and stops the machine.
- Safety guard and emergency stop protect the operator where fitted.

Before you start

1. Only trained personnel should operate the dough sheeter.
2. Read the operating manual and confirm the machine is suitable for the dough being processed.
3. Inspect rollers, feed tray, guards, conveyor, controls, and power cable for damage.
4. Ensure the machine is stable and all guards and safety devices are fitted.
5. Clean food-contact surfaces using approved food-safe cleaning procedures before use.
6. Keep hands, jewellery, loose clothing, and tools away from the roller feed area.

How to use

1. Wash hands and prepare the dough according to the recipe or work instructions.
2. Check that the rollers and feed tray are clean, dry, and free of foreign material.
3. Set the initial roller gap according to the dough type and required thickness.
4. Switch on the machine using the designated control.
5. Place a suitable portion of dough on the feed tray without reaching into the rollers.
6. Guide the dough using approved handling tools or the designated feed method.
7. Adjust the roller gap gradually between passes until the required thickness is reached.
8. Use the cutting attachment only when fitted, guarded, and approved for the task.
9. Stop the machine if dough jams, the rollers behave abnormally, or the guard shifts.
10. Switch off and isolate power before cleaning, clearing jams, or changing attachments.
11. Collect the finished dough sheets hygienically and inspect them for consistent thickness.

2. Clean the machine and record any faults according to workplace procedures.

⚠ Safety

- Never push dough into rollers with fingers or hands.
- Do not bypass guards, interlocks, or the emergency stop.
- Switch off and isolate power before clearing jams or cleaning near rollers and cutters.
- Keep loose clothing, jewellery, and long hair away from moving parts.
- Do not operate the machine with damaged rollers, exposed wiring, or faulty controls.
- Follow food hygiene rules and prevent cleaning chemicals from contaminating food-contact surfaces.

Care & storage

- Remove dough residue promptly using the approved cleaning method.
- Clean and sanitise food-contact surfaces according to the food safety procedure.
- Inspect rollers, belts, cutters, guards, and cables regularly.
- Arrange authorised maintenance if rollers become uneven, noisy, or difficult to adjust.

Common mistakes to avoid

- Setting the roller gap too narrow for the initial dough pass.
- Pushing dough into moving rollers by hand.
- Cleaning the machine while it remains connected to power.
- Using the machine with dirty food-contact surfaces or missing guards.
