Exfoliation Machine

Category: **Beauty, Wellness & Fitness** Type: **Full SOP** Priority: **High** 3 labs

Covers these lab items: Exfoliation machine

What it is used for

An exfoliation machine is used in beauty and skincare treatments to remove surface dead skin or cleanse the skin using a method designed for that device. Correct skin assessment, suitable settings, hygienic attachments, and trained operation help reduce irritation, burns, and cross-contamination.

Main parts

- Main unit houses the controls and operating components.
- Handpiece delivers the treatment to the skin.
- Treatment tip or attachment performs the device-specific exfoliation method.
- Power switch starts and stops the machine.
- Intensity or mode control adjusts treatment settings where fitted.
- Display or indicator shows operating status and settings.
- Connecting hose or cable links the handpiece to the main unit where applicable.
- Reusable attachment holder or storage tray keeps accessories organised.

Before you start

1. Only trained beauty or skincare personnel should operate the machine within their authorised scope.
2. Read the device manual and identify its specific exfoliation method and approved attachments.
3. Ask about skin sensitivity, allergies, current skin problems, recent procedures, and relevant contraindications.
4. Do not treat broken, infected, severely irritated, or otherwise unsuitable skin; refer to a qualified healthcare professional when needed.
5. Inspect the handpiece, tips, cable, hose, controls, and housing for damage.
6. Clean or disinfect reusable attachments according to the manufacturer's instructions and prepare single-use items as required.
7. Explain the treatment, obtain informed consent, and follow the approved skin-assessment procedure.

How to use

1. Wash hands and prepare the treatment area using the required hygiene procedure.
2. Select the correct attachment and setting for the device, treatment area, and assessed skin condition.

3. Position the client comfortably and protect clothing, eyes, and nearby sensitive areas as required by the device instructions.
4. Start the machine at the recommended initial setting and check that it operates normally.
5. Apply the handpiece using the approved technique, pressure, movement, and treatment duration for that device.
6. Observe the skin and ask the client about discomfort throughout the treatment.
7. Stop immediately if severe redness, burning, pain, swelling, or another unexpected reaction occurs.
8. Complete the treatment according to the approved protocol and apply suitable aftercare products where permitted.
9. Explain post-treatment care, including sun protection and avoiding irritating products when recommended for that device.
10. Switch off the machine and safely disconnect the handpiece before cleaning or changing attachments.
11. Clean, disinfect, or dispose of attachments according to their instructions and record the treatment where required.

⚠ Safety

- Never use an exfoliation machine without training and knowledge of its specific technology.
- Do not use damaged attachments or unapproved accessories.
- Avoid treating contraindicated skin conditions or areas restricted by the manufacturer.
- Do not increase intensity or treatment duration beyond the approved protocol.
- Use required eye protection and other PPE for the device and treatment method.
- Follow infection-control procedures and never reuse single-use attachments.

Care & storage

- Clean the main unit and handpiece according to the manufacturer's instructions.
- Inspect treatment tips, cables, hoses, and connectors before each session.
- Replace worn or damaged attachments and keep reusable accessories stored hygienically.
- Arrange authorised servicing if performance becomes irregular or controls fail.

Common mistakes to avoid

- Choosing an attachment or setting without assessing the client's skin.
- Applying excessive pressure or repeating passes beyond the approved protocol.
- Reusing single-use items or inadequately disinfecting reusable attachments.
- Ignoring pain, burning, or unexpected skin reactions during treatment.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
