Galvanic Machine

Category: **Beauty, Wellness & Fitness** Type: **Full SOP** Priority: **High** 2 labs

Covers these lab items: Galvanic Machine

What it is used for

A galvanic machine uses controlled low-level direct current for selected cosmetic treatments, depending on its design and attachments. Use only the approved electrode, product, intensity, and procedure suitable for the client.

Main parts

- Main control unit and power switch
- Positive and negative electrodes or treatment probes
- Electrode cables and connectors
- Intensity and mode controls
- Compatible treatment accessories
- Power cord and plug

Before you start

1. Inspect the machine, electrode surfaces, cables, and connectors for damage.
2. Confirm the electrodes and accessories are compatible with the machine.
3. Clean and disinfect reusable electrodes according to the manufacturer's instructions.
4. Check the client's skin condition, allergies, and treatment suitability.
5. Ask about relevant contraindications, including implanted electronic devices, as specified by the manufacturer.
6. Prepare only the approved conductive product and keep the work area dry.

How to use

1. Place the machine on a stable, dry treatment surface.
2. Connect the required electrodes while the machine is switched off.
3. Apply the approved conductive product according to its instructions.
4. Position the electrodes as specified for the selected treatment.
5. Connect the machine to a suitable outlet and switch it on.
6. Select the correct mode and begin at the lowest suitable intensity.
7. Increase intensity gradually only within the approved operating range.
8. Move or hold the electrodes using the prescribed technique and treatment time.
9. Monitor the client's comfort and skin response throughout the procedure.
10. Reduce intensity to zero and switch off before removing or changing electrodes.
11. Unplug the machine after treatment if required by the instructions.
12. Clean, disinfect, dry, and store reusable electrodes and accessories.

⚠ Safety

- Only trained beauty personnel should operate the machine.
- Do not use damaged electrodes, cables, or electrical connectors.
- Follow the manufacturer's contraindications and avoid use where the device is not suitable.
- Do not place electrodes across the chest or other prohibited areas.
- Keep electrical connections dry and never adjust electrodes while current is flowing.
- Stop immediately if the client experiences pain, burning, dizziness, or unusual irritation.

Care & storage

- Clean the machine exterior using an approved method.
- Disinfect reusable electrodes after every client.
- Inspect electrode surfaces and cables for corrosion, wear, or damage.
- Store electrodes separately to protect their surfaces and connectors.

Common mistakes to avoid

- Using an unapproved product or incompatible electrode.
- Starting at excessive intensity or exceeding the prescribed treatment time.
- Changing electrode positions while current is flowing.
- Ignoring contraindications or signs of discomfort.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
