Hood Dryer

Category: **Beauty, Wellness & Fitness** Type: **Full SOP** Priority: **High** 2 labs

Covers these lab items: Hood dryer

What it is used for

A hood dryer circulates warm air around the head to dry hair or support selected hairstyling treatments. Use an appropriate heat and airflow setting and monitor client comfort throughout the session.

Main parts

- Hood or dome
- Heating element and airflow fan
- Temperature and timer controls
- Height or position adjustment mechanism
- Base, stand, or mounting assembly
- Power cord and switch

Before you start

1. Inspect the hood, stand, controls, cord, and plug for damage.
2. Place the dryer on a stable surface and check its adjustment mechanism.
3. Clean the hood and any reusable client-contact accessories.
4. Check the client's scalp condition, heat sensitivity, and treatment suitability.
5. Set a suitable temperature and timer for the hair type and treatment.
6. Ensure air inlets and outlets are clear and the area is dry.

How to use

1. Position the hood dryer securely and adjust its height before use.
2. Ask the client to sit comfortably and remove unsuitable accessories near the hood.
3. Arrange the hair and treatment product according to the service procedure.
4. Connect the dryer to a suitable electrical outlet.
5. Switch on the unit and select a low suitable temperature setting.
6. Lower or position the hood so it does not press tightly against the client.
7. Set the timer according to the treatment instructions.
8. Monitor the client's comfort, scalp temperature, and airflow throughout the session.
9. Reduce heat or stop the dryer immediately if discomfort or excessive heat occurs.
10. Switch off the unit before moving the hood away from the client.
11. Allow hot components to cool before cleaning or repositioning the unit.
12. Clean the hood and client-contact surfaces after use.
13. Store or park the dryer securely and report any faults.

⚠ Safety

- Only trained personnel should operate the hood dryer professionally.
- Do not use the dryer with damaged wiring, a loose stand, or faulty controls.
- Keep ventilation openings clear and avoid covering the unit.
- Prevent hair, towels, and clothing from contacting hot components.
- Do not leave the client unattended if the procedure requires monitoring.
- Disconnect power before cleaning or servicing the dryer.

Care & storage

- Clean the hood and contact surfaces between clients.
- Remove dust and hair from air inlets according to instructions.
- Inspect the stand, adjustment mechanism, cord, and plug regularly.
- Arrange servicing if airflow, temperature control, or timer operation becomes abnormal.

Common mistakes to avoid

- Setting excessive heat or using an unsuitable treatment duration.
- Positioning the hood too close or pressing it against the client.
- Blocking airflow openings with towels or other items.
- Cleaning the unit while it is hot or connected to power.
