Ice Cream Maker

Category: **Food Processing & Kitchen** Type: **Full SOP** Priority: **High** 2 labs

Covers these lab items: Ice Cream Maker

What it is used for

An ice cream maker freezes and mixes a prepared mixture to produce ice cream or other frozen desserts. Follow the machine-specific instructions and maintain strict food hygiene and temperature control throughout preparation.

Main parts

- Mixing and freezing bowl or cylinder
- Mixing paddle, dasher, or beater
- Motor or drive unit
- Lid and ingredient feed opening, if fitted
- Control panel, timer, or speed selector
- Power cord and removable accessories

Before you start

1. Confirm the machine type and follow its preparation instructions.
2. Inspect the bowl, paddle, lid, motor, and power cord for damage.
3. Clean and sanitise all food-contact parts before use.
4. Prepare ingredients using safe food-handling practices and keep perishables chilled.
5. Pre-freeze the bowl if required by the machine design.
6. Ensure the machine is stable, correctly assembled, and has adequate ventilation.

How to use

1. Switch off and unplug the machine before assembling its parts.
2. Install the bowl and paddle according to the manufacturer's instructions.
3. Add the prepared mixture without exceeding the marked capacity.
4. Secure the lid and confirm that the paddle is correctly positioned.
5. Connect the machine to a suitable power supply.
6. Select the recommended mixing or freezing setting and start the machine.
7. Add extra ingredients through the designated opening only if the model permits it.
8. Monitor the mixing process and stop if the motor overheats or abnormal noise occurs.
9. Allow the mixture to reach the required consistency according to the recipe and instructions.
10. Switch off the machine before removing the lid or finished product.
11. Transfer the ice cream using a clean utensil into a suitable food-safe container.
12. Cover and store the product at the required frozen-storage temperature.
13. Unplug the machine and allow removable parts to reach a safe temperature before cleaning.

4. Clean, sanitise, dry, and store all compatible components.

⚠ Safety

- Only trained users should operate commercial ice cream-making equipment.
- Keep hands and utensils away from the paddle while the machine is running.
- Never bypass lid interlocks or other safety features.
- Do not exceed the specified capacity or run the machine with incorrect assembly.
- Keep electrical connections dry and avoid water entering the motor unit.
- Follow food-safety guidance for ingredient handling, storage, and allergen separation.

Care & storage

- Clean and sanitise the bowl, paddle, lid, and food-contact parts after use.
- Do not immerse the motor unit unless it is specifically designed for immersion.
- Inspect seals, blades or paddles, fasteners, and electrical parts regularly.
- Store the machine clean and dry with removable parts properly arranged.
- Arrange servicing if freezing performance or motor operation becomes abnormal.

Common mistakes to avoid

- Adding more mixture than the machine's rated capacity.
- Starting the machine with the paddle or bowl incorrectly fitted.
- Opening or reaching into the machine while the paddle is moving.
- Allowing prepared mixture or finished ice cream to remain at unsafe temperatures.
