Spotting Gun

Category: **Hospitality & Housekeeping** Type: **Full SOP** Priority: **High** 2 labs

Covers these lab items: Spotting Gun; Stain Removing Machines (Spot Gun)

What it is used for

A spotting gun applies a controlled jet of cleaning solution or compressed air to treat localised stains on fabric and upholstery. Use the correct solution, pressure, and technique for the material to avoid damage, chemical exposure, or spreading the stain.

Main parts

- Gun body and trigger
- Solution reservoir or chemical feed connection
- Nozzle and spray outlet
- Air or fluid inlet and hose
- Pressure regulator, if fitted
- Power or compressed-air connection, depending on model

Before you start

1. Identify the spotting gun type and read the operating instructions.
2. Check the fabric care label and identify the stain and material compatibility.
3. Inspect the gun, nozzle, hose, reservoir, and connections for damage or leakage.
4. Select a compatible stain-removal solution and follow its safety instructions.
5. Test the solution on a hidden area of the fabric before treatment.
6. Wear suitable gloves and eye protection and ensure adequate ventilation.

How to use

1. Switch off or disconnect the gun before filling the reservoir or changing attachments.
2. Prepare the cleaning solution at the concentration specified by the product instructions.
3. Fill the reservoir or connect the approved solution supply without overfilling.
4. Connect the air or power supply as required by the model.
5. Set the pressure or spray setting within the recommended operating range.
6. Place an absorbent cloth beneath or behind the stained area where appropriate.
7. Hold the nozzle at the recommended distance from the fabric.
8. Apply short, controlled bursts while working from the outside of the stain inward when suitable.
9. Avoid soaking delicate fabric or forcing liquid deep into the material.
10. Blot or rinse the treated area according to the cleaning procedure.
11. Check the result and repeat only if the material and product instructions permit.
12. Switch off and release pressure before disconnecting hoses or cleaning the nozzle.
13. Empty and clean the reservoir and nozzle according to the manufacturer's instructions.

⚠ Safety

- Only trained users should operate the spotting gun.
- Never direct compressed air or cleaning spray toward people, skin, or eyes.
- Use only approved chemicals and never mix cleaning products unless expressly permitted.
- Do not exceed the rated pressure of the gun, hose, or fittings.
- Keep the work area ventilated and avoid inhaling spray mist.
- Depressurise and disconnect the equipment before maintenance or clearing a blockage.

Care & storage

- Empty and rinse the reservoir after use as instructed.
- Clean the nozzle and fluid passages to prevent clogging.
- Inspect hoses, seals, trigger, and connectors regularly.
- Store chemicals in labelled containers and the gun in a clean, dry place.
- Arrange servicing for leakage, inconsistent spray, or faulty controls.

Common mistakes to avoid

- Using a stain remover that is unsuitable for the fabric.
- Applying excessive pressure or soaking the material.
- Spraying without testing the solution on a hidden area.
- Disconnecting a pressurised hose or cleaning a blocked nozzle while connected.
