Solar Panel

Category: **Solar, Power & Energy** Type: **Short SOP** Priority: **High** 5 labs

Covers these lab items: Solar panels; Solar Panels for Demonstration

What it is used for

A solar panel converts sunlight into electrical energy for demonstrations or power applications. Handle the panel carefully and use suitable electrical equipment when checking its output.

How to use

1. Inspect the panel surface, frame, junction box, and cables for cracks or damage.
2. Place or mount the panel securely in a stable location facing the light source.
3. Keep the panel surface clean and remove shading from the active area.
4. Connect the panel to the approved demonstration load or measuring equipment using the correct polarity.
5. Check voltage and current with suitable rated instruments and the approved procedure.
6. Record the test conditions, including light conditions and measured output.
7. Disconnect the equipment safely and cover or store the panel when required.

⚠ Safety

- Do not touch exposed conductors or damaged cables.
- Avoid short-circuiting the panel output and follow the specified connection procedure.
- Secure panels against wind and accidental tipping.
- Use care when lifting panels and protect them from impact.

Care & storage

- Clean the panel with a soft cloth and suitable water-based cleaner when needed.
- Inspect cables, connectors, mounting points, and the panel surface regularly.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
