Battery Charger

Category: **Solar, Power & Energy** Type: **Short SOP** Priority: **High** 4 labs

Covers these lab items: Battery Charger

What it is used for

A battery charger supplies controlled electrical energy to recharge compatible rechargeable batteries. Match the charger to the battery chemistry, voltage, and charging requirements before connecting it.

How to use

1. Inspect the charger, cable, plug, and connectors for damage.
2. Check the battery label and confirm that the charger is compatible.
3. Place the battery and charger in a dry, well-ventilated location.
4. Connect the battery with the correct polarity and follow the manufacturer's sequence.
5. Switch on the charger and check its status indicators.
6. Allow charging to finish according to the charger instructions and monitor for unusual heat or alarms.
7. Switch off the supply before disconnecting if required by the instructions.
8. Disconnect, inspect the battery, and store the charger safely after use.

⚠ Safety

- Never charge damaged, leaking, swollen, or incompatible batteries.
- Keep the charger away from water and flammable materials.
- Do not cover ventilation openings or leave charging equipment unattended where prohibited.
- Use only the specified power supply and approved charger.

Care & storage

- Keep the charger and connectors clean, dry, and free from dust.
- Inspect cables regularly and replace damaged parts before further use.
