Hair Straightener

Category: **Beauty, Wellness & Fitness** Type: **Short SOP** Priority: **High** 4 labs

Covers these lab items: Straightening Iron

What it is used for

A hair straightener uses heated plates to straighten hair for styling. Use it on dry hair unless the manufacturer specifically permits another method, and select a suitable temperature for the hair type.

How to use

1. Inspect the power cord, plug, handle, and plates for damage.
2. Place the straightener on a heat-resistant surface and connect it to the approved power supply.
3. Switch on the device and select the recommended temperature setting.
4. Ensure the hair is dry and combed into manageable sections.
5. Separate a small section of hair and place it between the plates near the roots without touching the scalp.
6. Glide the straightener steadily toward the ends without holding it in one place for too long.
7. Switch off and unplug the device after styling.
8. Allow the plates to cool completely before cleaning or storage.

⚠ Safety

- Never touch the heated plates or leave the powered straightener unattended.
- Keep the device away from water, sinks, and wet surfaces.
- Avoid direct contact between hot plates and skin, scalp, or eyes.
- Do not wrap the power cord tightly around the hot device.

Care & storage

- Clean cooled plates with a soft, dry cloth according to the manual.
- Store only after the device has cooled fully and the cord is dry.
