Currency Counting Machine

Category: **Retail, Logistics & Warehouse** Type: **Short SOP** Priority: **High** 2 labs

Covers these lab items: Money Currency Counting Machine with Built-In-Fake Note Detector

What it is used for

A currency counting machine counts banknotes and may identify suspicious notes using built-in detection features. Prepare the notes correctly and verify unusual results before accepting or recording the count.

How to use

1. Inspect the machine, power cable, hopper, and stacker for damage or obstructions.
2. Switch on the machine and allow its self-check to complete.
3. Select the correct currency and counting or detection mode, if available.
4. Straighten the banknotes and remove clips, rubber bands, and foreign objects.
5. Place the notes neatly in the hopper within the machine's capacity.
6. Start counting and watch for jams, errors, or suspicious-note alerts.
7. Separate flagged notes and verify them using approved banknote-checking procedures.
8. Compare the displayed count with the expected total and record the result.
9. Switch off the machine and clear the hopper and stacker after use.

⚠ Safety

- Keep fingers, jewellery, and loose clothing away from moving rollers.
- Do not force notes into the machine or reach inside while it is running.
- Treat detection alerts as warnings, not definitive proof that a note is counterfeit.
- Disconnect power before cleaning or clearing a persistent jam.

Care & storage

- Clean sensors and rollers according to the manufacturer's instructions.
- Keep the machine dry and arrange servicing if counting errors or alerts persist.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
