Solar Cooker

Category: **Solar, Power & Energy** Type: **Short SOP** Priority: **High** 2 labs

Covers these lab items: Solar cooker

What it is used for

A solar cooker uses sunlight to heat and cook food without conventional fuel. Position it correctly, use suitable cookware, and monitor food temperature and cooking progress.

How to use

1. Inspect the cooker, reflector, glazing, supports, and hinges for damage.
2. Place the cooker on stable ground in a location with unobstructed sunlight.
3. Adjust the reflector or orientation according to the manufacturer's instructions.
4. Prepare food in suitable cookware and place it securely inside the cooking area.
5. Use heat-resistant gloves when handling hot cookware or internal components.
6. Monitor cooking progress and check food is adequately cooked before serving.
7. Move or close the cooker safely when cooking is complete.
8. Allow components to cool before cleaning and storage.

⚠ Safety

- Never look directly at concentrated reflected sunlight.
- Use gloves and suitable utensils to prevent burns from hot cookware.
- Keep children away from hot surfaces and moving reflectors.
- Follow food hygiene practices and ensure food reaches a safe cooking temperature.

Care & storage

- Clean the cooking surface and reflector with suitable non-abrasive materials.
- Store the cooker dry and protect glazing and reflectors from impact.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
