Solar Street Light

Category: **Solar, Power & Energy** Type: **Short SOP** Priority: **High** 2 labs

Covers these lab items: Solar street light

What it is used for

A solar street light uses a solar panel and battery to power outdoor lighting, often through an automatic controller. Check the system components and operate it according to the installation and maintenance instructions.

How to use

1. Inspect the panel, light fixture, battery enclosure, controller, and cables for damage.
2. Confirm that the pole and mounting brackets are secure before inspection.
3. Check panel orientation and remove shading where safe and permitted.
4. Verify battery status and controller settings according to the manufacturer's instructions.
5. Test the light using the approved operating or test mode.
6. Confirm that automatic lighting functions respond correctly to the configured conditions.
7. Report faults and isolate the system before authorised maintenance.
8. Secure all covers and confirm the installation is stable after work.

⚠ Safety

- Do not climb poles or access elevated fixtures without approved training and fall protection.
- Keep away from exposed conductors and damaged electrical enclosures.
- Use qualified personnel for electrical work and battery replacement.
- Avoid working at height during strong winds, rain, or lightning.

Care & storage

- Clean the solar panel and inspect mounting hardware at scheduled intervals.
- Check battery condition, wiring, and lighting performance according to the maintenance plan.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
