Syringe

Category: **Medical, Healthcare & First Aid** Type: **Short SOP** Priority: **High** 2 labs

Covers these lab items: Disposable Glycerine syringe; Plastic syringes and hormone applicators

What it is used for

A syringe measures and delivers a specified volume of liquid for an approved medical, laboratory, or application task. Use the correct syringe type and follow hygiene and disposal procedures appropriate to its intended use.

How to use

1. Check the syringe size, markings, packaging, and intended use before use.
2. Confirm that the syringe is clean, undamaged, and within its expiry date if sterile.
3. Prepare the liquid and work area according to the approved procedure.
4. Draw the required volume carefully and remove air bubbles when the method requires it.
5. Administer or apply the liquid only by the authorised route and intended use.
6. Read the scale at eye level and verify the volume before delivery.
7. Dispose of single-use syringes and needles in the designated sharps or medical waste container.
8. Clean reusable non-medical applicators according to the manufacturer's instructions.

⚠ Safety

- Never reuse a single-use syringe or needle.
- Do not use a syringe with damaged markings, packaging, or barrel.
- Use sterile technique for medical procedures and follow trained clinical guidance.
- Never recap or discard exposed needles in ordinary waste.

Care & storage

- Keep unused syringes sealed in clean, dry storage.
- Dispose of used medical syringes promptly and maintain hygiene for reusable applicators.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
