3D Pen

Category: **Computers, IT & Office** Type: **Short SOP** Priority: **High** 1 labs

Covers these lab items: 3d filament pen

What it is used for

A 3D pen heats plastic filament and extrudes it to create raised drawings and small models. Use compatible filament and work on a suitable heat-resistant surface.

How to use

1. Inspect the pen, power adapter, controls, nozzle, and cable for damage.
2. Place the pen on a stable, heat-resistant work surface.
3. Insert the compatible filament according to the manufacturer's instructions.
4. Connect the approved power adapter and select the recommended temperature setting.
5. Wait until the pen indicates that it is ready for extrusion.
6. Feed the filament slowly and draw the design while keeping the nozzle clear of the surface and fingers.
7. Stop extrusion, unload filament if required, and switch off the pen.
8. Allow the nozzle to cool completely before cleaning or storage.

⚠ Safety

- Never touch the hot nozzle or molten plastic.
- Keep the pen away from water and flammable materials.
- Use ventilation suitable for the filament and avoid inhaling fumes.
- Keep children supervised and do not leave the powered pen unattended.

Care & storage

- Remove filament and clean the nozzle only as directed by the manufacturer.
- Store the cooled pen and adapter in a dry, secure place.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
