Needle Detector

Category: **Sewing, Textile & Handicraft** Type: **Short SOP** Priority: **High** 1 labs

Covers these lab items: Needle Detector

What it is used for

A needle detector checks garments, fabrics, or other textile products for broken needles and metallic fragments. Use the detector according to the product size and the manufacturer's inspection procedure.

How to use

1. Inspect the detector, sensor area, power supply, and conveyor if fitted.
2. Switch on the detector and complete its self-check or calibration procedure.
3. Test the detector using the approved test piece supplied for the machine.
4. Place the garment or textile item in the specified inspection area.
5. Move the item through the detector at the recommended speed and orientation.
6. Observe audible, visual, or automatic reject alerts for detected metal.
7. Recheck flagged items according to the site's needle-control procedure.
8. Record inspection results and switch off the detector after use.

⚠ Safety

- Keep hands and loose clothing away from moving conveyor parts.
- Do not bypass alarms or ignore failed test-piece checks.
- Follow the site's procedure for isolating and handling suspected needle-contaminated items.
- Disconnect power before cleaning or servicing the equipment.

Care & storage

- Keep the sensor area clean and free from metal scraps.
- Perform routine test-piece checks and servicing as recommended by the manufacturer.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
