Airway Mannequin

Category: **Medical, Healthcare & First Aid** Type: **Full SOP** Priority: **Medium** 1 labs

Covers these lab items: Airway Mannequin

What it is used for

An airway mannequin provides hands-on practice for airway assessment and approved airway management techniques. It helps learners develop correct positioning, ventilation, and device-placement skills without practising invasive procedures on a person.

Main parts

- Mannequin head, neck, and torso assembly
- Mouth and nasal airway passages
- Replaceable airway or lung insert if fitted
- Ventilation bag or compatible practice device
- Training airway adjuncts such as masks or tubes
- Cleaning supplies and replacement consumables

Before you start

1. Read the mannequin instructions and identify the airway procedures supported by the model.
2. Inspect the head, neck, mouth, airway passages, connectors, and replaceable parts for damage.
3. Confirm that the correct training accessories and consumables are available.
4. Clean the mannequin and accessories according to the infection-control procedure before use.
5. Explain the learning objectives, approved techniques, and limits of the training model.
6. Wear suitable gloves and ensure the practice area is clean and well lit.

How to use

1. Place the mannequin on a stable training surface in the position required for the exercise.
2. Demonstrate the approved airway assessment and positioning technique for the scenario.
3. Practise opening the airway using the technique appropriate to the training objective.
4. Insert the designated practice airway adjunct only as instructed and with the correct technique.
5. Use the compatible ventilation device to practise gentle ventilation and observe the model's response.
6. Check that the simulated chest movement or other model indicator matches the expected result.
7. Remove training devices carefully and reset replaceable airway components when required.
8. Repeat the exercise with supervised feedback on positioning, technique, and device handling.
9. After practice, remove disposable items and clean reusable components using approved products.
10. Inspect the mannequin, dry it as instructed, and return it to storage.

⚠ Safety

- Use the mannequin only for the procedures approved by its manufacturer.
- Never perform invasive airway procedures on a real person as a practice exercise.
- Do not force airway devices or apply excessive pressure that could damage the model.
- Use single-use training consumables only as permitted and dispose of them appropriately.
- Follow infection-control procedures when sharing the mannequin between learners.
- Keep cleaning chemicals away from learners' eyes and follow product safety instructions.

Care & storage

- Clean and disinfect mouth-contact surfaces after each learner or session as specified.
- Replace damaged airway inserts, masks, or other consumables with compatible parts.
- Inspect joints, airway passages, connectors, and skin-like surfaces for wear or tears.
- Store the mannequin clean and dry in its protective case or designated area.

Common mistakes to avoid

- Using an unsupported device can damage the airway passages or give misleading feedback.
- Excessive force during insertion can tear replaceable components.
- Poor cleaning between learners can spread contamination.
- Incorrect head positioning can prevent effective simulated ventilation.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
