Spanner

Category: **Hand Tools - Fastening & Gripping** Type: **Short SOP** Priority: **Medium** 40 labs

Covers these lab items: Alignment wrenches; D.E spanner (insulated); Double End Ring spanner; Double ended flat spanner; Double ended ring spanner; Double Ended spanner set; Double-ended flat and ring spanner; Double-ended flat spanner (1 set); Double-ended ring spanner (1 set); Nozzel/Nippl e spanner; Open and Close (Fix)

What it is used for

A spanner tightens or loosens nuts and bolts using a matching size and suitable jaw or ring profile. Choose the correct spanner to avoid slipping and damaging fasteners.

How to use

1. Inspect the spanner for cracks, worn jaws, bending, or other damage.
2. Select the correct type and size for the nut or bolt.
3. Fit the spanner fully onto the fastener before applying force.
4. Pull smoothly in a controlled direction where possible and keep stable footing.
5. Use the correct ring or open-end profile for the fastener and available access.
6. Stop if the spanner slips or the fastener begins to round off.
7. Clean the tool and return it to the designated storage location.

⚠ Safety

- Do not use a spanner with worn jaws or a cracked handle.
- Do not extend the handle with an unapproved pipe or use excessive force.
- Keep fingers clear of pinch points and avoid sudden loss of balance.
- Use insulated spanners for electrical work only when correctly rated and inspected.

Care & storage

- Wipe the spanner clean and dry after use.
- Store spanners in an organised, dry location and replace damaged tools.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
