Covers these lab items: Ball pin; Claw Hammer; Hammer; Hammer & Pliers; Hammer (1 set); Hammer C.P (hammer cross pain) with handle forged steel; Hammer (set of 4); Hammers; Hammers B.P (Hammers ball pain)

What it is used for

A hammer delivers controlled impact for tasks such as driving nails, fitting parts, or shaping materials. Select the correct hammer type and use it only for its intended purpose.

How to use

1. Inspect the hammer head, handle, and joint for cracks, looseness, or damage.
2. Select a hammer suitable for the material and task.
3. Secure the workpiece on a stable surface before striking.
4. Hold the handle firmly and position the striking face accurately.
5. Use controlled strokes and keep the work area clear of other people.
6. Stop if the head loosens, the handle cracks, or the tool slips.
7. Clean the hammer and store it safely after use.

⚠ Safety

- Wear safety goggles when striking materials that may produce flying fragments.
- Never use a hammer with a loose head or damaged handle.
- Keep fingers away from the striking area and support points.
- Do not use a hammer as a pry bar unless designed for that purpose.

Care & storage

- Wipe the head and handle clean and dry after use.
- Store the hammer in a dry location and replace damaged handles or heads.
