Thermometer

Category: **Medical, Healthcare & First Aid** Type: **Short SOP** Priority: **Medium** 25 labs

Covers these lab items: Animal Digital Thermometer; Digital Candy Thermometer (for taking food temperature; Digital thermometer; Food Thermometer; Temperature meter; Thermometer; Thermometers

What it is used for

A thermometer measures the temperature of a person, animal, food, liquid, or surrounding environment, depending on its design. Select the correct thermometer type and follow the specified measurement method.

How to use

1. Inspect the thermometer, probe, display, and battery or power supply.
2. Confirm that the thermometer is suitable for the material or subject being measured.
3. Clean or sanitise the probe using the approved method before use.
4. Switch on the thermometer and select the required mode or unit.
5. Position the probe at the specified measurement location without damaging the subject or sample.
6. Wait for the reading to stabilise or for the completion signal.
7. Record the temperature with units and identify the sample or subject.
8. Clean the probe after use and switch off the thermometer.

⚠ Safety

- Do not use a damaged thermometer or a probe unsuitable for the sample.
- Use a separate or properly sanitised probe for food and clinical measurements as required.
- Avoid cross-contamination between samples or people.
- Follow the manufacturer's temperature limits and safe handling instructions.

Care & storage

- Clean and store the thermometer according to its design and instructions.
- Replace batteries when needed and check calibration where required.
