Measuring Cylinder

Category: **Laboratory Instruments & Glassware** Type: **Short SOP** Priority: **Medium**

22 labs

Covers these lab items: Graduated cylinders; Measuring 250ml Cylinder; Measuring cylinder; Measuring Cylinders (5ml to 50ml) graduated; Measuring cylinders and beakers; Measuring Cylinders graduated; Measuring Glass; Measuring Glass sets

What it is used for

A measuring cylinder measures liquid volume using graduated markings. Select a suitable cylinder size and read the liquid level correctly to obtain an accurate measurement.

How to use

1. Inspect the cylinder for cracks, chips, cleanliness, and readable graduations.
2. Select a cylinder with suitable capacity and scale divisions for the required volume.
3. Place the cylinder upright on a level surface.
4. Pour the liquid slowly to avoid splashing and excessive bubbles.
5. Allow the liquid to settle before reading the level.
6. Read the bottom of the meniscus at eye level for most clear liquids.
7. Record the measured volume with units and sample identification.
8. Empty and clean the cylinder according to the liquid and laboratory procedure.

⚠ Safety

- Handle glass cylinders carefully and do not use cracked or chipped glassware.
- Wear appropriate eye protection and gloves when handling hazardous liquids.
- Never pipette or draw liquid by mouth.
- Do not heat a measuring cylinder unless it is specifically designed for that use.

Care & storage

- Rinse and clean the cylinder using suitable laboratory methods after use.
- Allow it to dry and store it upright in a protected location.
