Hacksaw

Category: **Hand Tools - Cutting & Shaping** Type: **Short SOP** Priority: **Medium** 21 labs

Covers these lab items: ADJUSTAB LE HACKSAW FRAME; Hacksaw; Hacksaw blade with frame and one spare blade; Hacksaw Frame; Hacksaw frame with blade; Hacksaw frame with the blade; Hacksaw, Hammer, Scissor

What it is used for

A hacksaw cuts metal, plastic, or other suitable materials using a tensioned toothed blade. Select the correct blade and secure the workpiece before cutting.

How to use

1. Inspect the frame, handle, blade, and tension mechanism for damage.
2. Select a blade suited to the material and required cut.
3. Fit the blade securely with its teeth facing the correct cutting direction.
4. Adjust blade tension according to the frame manufacturer's instructions.
5. Secure the workpiece firmly in a vice or approved holder.
6. Align the blade with the cutting line and use smooth, controlled strokes.
7. Avoid twisting the blade and check progress periodically.
8. Release tension if required, clean the saw, and store it safely.

⚠ Safety

- Wear safety goggles to protect against flying particles.
- Keep hands away from the blade path and sharp cut edges.
- Do not use a cracked frame or loose, damaged blade.
- Do not force the saw or touch the blade immediately after prolonged cutting.

Care & storage

- Clean the frame and blade after use and remove metal debris safely.
- Release blade tension for storage if recommended by the manufacturer.
