Safety Shoes

Category: **Safety & PPE** Type: **Short SOP** Priority: **Medium** 18 labs

Covers these lab items: Boots; Gumboots; Rubber Chappals; Safety footwear; Safety shoes

What it is used for

Safety shoes protect the feet from hazards such as impact, compression, punctures, or slipping, depending on their design and rating. Select footwear suitable for the workplace and inspect it before use.

How to use

1. Check the footwear type, size, sole, toe protection, and condition.
2. Confirm that the footwear rating matches the workplace hazards.
3. Wear the shoes securely and fasten laces or closures properly.
4. Check that the soles provide suitable grip and the fit allows safe movement.
5. Use the footwear throughout the task and avoid removing it in hazardous areas.
6. Clean the footwear after use and inspect it for damage.
7. Dry and store the shoes in a suitable place.

⚠ Safety

- Do not use footwear with damaged soles, exposed toe caps, or broken closures.
- Use electrical hazard-rated footwear only where appropriate and as part of a broader safety system.
- Keep soles free from grease, mud, and materials that reduce grip.
- Replace footwear when protective performance is compromised.

Care & storage

- Clean footwear with materials suitable for its construction.
- Dry naturally away from direct heat and inspect regularly for wear.
