Wire Stripper

Category: **Hand Tools - Cutting & Shaping** Type: **Short SOP** Priority: **Medium** 14 labs

Covers these lab items: Wire stripper; Wire Stripper (Automatic); Wire strippers

What it is used for

Use a wire stripper to remove insulation from a wire while preserving the conductor for safe electrical connections.

How to use

1. Choose a stripper suitable for the wire type and gauge.
2. Inspect the cutting edges, adjustment setting, and handles for damage.
3. Disconnect the wire from every power source before stripping.
4. Measure the required stripping length and position the wire in the correct notch.
5. Close the handles carefully to cut the insulation without damaging the conductor.
6. Pull away the insulation and inspect the exposed wire strands or core.
7. Adjust the setting or tool size if the conductor has been nicked.

⚠ Safety

- Never strip a wire while it is energized.
- Keep fingers away from cutting edges and moving parts.
- Wear eye protection when cut insulation or wire strands may fly.

Care & storage

- Remove insulation scraps and wipe the tool after use.
- Store the tool dry with the cutting edges protected.
