Brake System

Category: **Automotive** Type: **Short SOP** Priority: **Medium** 12 labs

Covers these lab items: Brake pads; Brake shoes; Brakes & Controls; Disc & drum brakes system; Old second hand disc brake

What it is used for

Use a brake system assembly or training unit to understand and inspect how braking components slow or stop a vehicle.

How to use

1. Park the vehicle securely or stabilize the training unit before inspection.
2. Identify the brake pedal, master cylinder, lines, calipers or wheel cylinders, and pads or shoes.
3. Check visible components for leaks, cracks, wear, or loose connections.
4. Follow the manufacturer's procedure to inspect or demonstrate brake operation.
5. Use approved tools to measure pad, shoe, disc, or drum wear when required.
6. Confirm all parts are correctly installed before any functional test.
7. Carry out testing only in a controlled area using the approved procedure.

⚠ Safety

- Never operate a vehicle with suspected brake failure.
- Support raised vehicles with approved stands; never rely on a jack alone.
- Avoid inhaling brake dust and use approved cleaning methods.
- Brake hydraulic repairs and road tests must be performed by qualified personnel.

Care & storage

- Keep brake components clean and replace worn parts to specification.
- Record inspection findings and report leaks, unusual noise, or poor braking.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
