Drill Bit

Category: **Power Tools & Workshop Machines** Type: **Short SOP** Priority: **Medium**

12 labs

Covers these lab items: Auger Bit; Center Drill; Drill bit set; HSS Drill set; Masonry Drill (Concrete Drill)

What it is used for

Use a drill bit with a compatible drill to make holes of the required diameter and depth in suitable materials.

How to use

1. Choose the correct bit type and diameter for the material and hole size.
2. Inspect the bit for cracks, bending, blunt edges, or damage.
3. Secure the workpiece and mark the hole location.
4. Fit the bit firmly into the compatible drill chuck and remove the chuck key.
5. Select an appropriate speed and operating mode for the material.
6. Wear eye protection and drill steadily without forcing the tool.
7. Stop the drill before removing the bit or clearing debris.

⚠ Safety

- Disconnect power or remove the battery before changing bits.
- Clamp the workpiece; never hold small parts by hand while drilling.
- Use suitable eye protection and keep loose clothing away from rotating parts.
- Use masonry bits and appropriate dust controls for concrete or brick.

Care & storage

- Clean the bit after use and store it dry in an organized case.
- Replace worn or damaged bits before the next task.
