Network Switch

Category: **Telecom & Networking** Type: **Short SOP** Priority: **Medium** 11 labs

Covers these lab items: 16 Port Switches; Hubs; Hubs/switches; Local Area Network; Local Area Network (LAN); Network Switch

What it is used for

Use a network switch to connect compatible wired devices within a local area network and enable communication between them.

How to use

1. Check the switch ports, power adapter, and casing for visible damage.
2. Place the switch in a ventilated location with suitable power access.
3. Connect the power adapter using the specified voltage and polarity.
4. Connect Ethernet cables from computers, routers, or other network devices to the switch ports.
5. Observe link and activity indicators to confirm physical connections.
6. Configure managed-switch settings only when authorized and according to the network plan.
7. Test connectivity and label cables or ports where required.

⚠ Safety

- Use only the power adapter specified for the switch.
- Do not connect damaged cables or expose the device to moisture.
- Disconnect power before cleaning or handling internal parts.
- Follow network security rules and do not change settings without authorization.

Care & storage

- Keep ventilation openings clear and dust the casing with power disconnected.
- Label connections and store spare cables neatly.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
