Pressure Gauge

Category: **Measuring & Marking Tools** Type: **Short SOP** Priority: **Medium** 11 labs

Covers these lab items: Electronic pressure gauge; Pressure gauge; Pressure indicators; Pressure meter

What it is used for

Use a pressure gauge to measure and monitor pressure in a suitable liquid or gas system within the gauge's rated range.

How to use

1. Check the gauge body, dial or display, connector, and scale for damage.
2. Confirm the gauge range and pressure rating suit the system.
3. Ensure the system is isolated and depressurized before fitting or removing the gauge.
4. Connect the gauge securely using the correct fitting and seal.
5. Open the pressure supply gradually according to the equipment procedure.
6. Read and record the pressure once the indication stabilizes.
7. Close the supply and release pressure safely before removing the gauge.

⚠ Safety

- Never exceed the gauge or system pressure rating.
- Use a gauge compatible with the fluid, gas, and operating temperature.
- Do not loosen a pressurized connection or stand in front of it.
- Use suitable PPE and follow the equipment isolation procedure.

Care & storage

- Clean the gauge exterior and keep the display readable.
- Store it safely and arrange calibration or replacement when required.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
