Try Square

Category: **Measuring & Marking Tools** Type: **Short SOP** Priority: **Medium** 10 labs

Covers these lab items: Square; Tri-Square (Casting base) (construction and Carpentry); Tri-square (Welding); Try Square

What it is used for

Use a try square to check or mark a right angle between two edges on wood, metal, or other suitable workpieces.

How to use

1. Select a try square suitable for the workpiece and required accuracy.
2. Inspect the blade and stock for bends, damage, or loose joints.
3. Clean the reference edge and the square's contact surfaces.
4. Press the stock firmly against the reference edge of the workpiece.
5. Check the blade for a gap along the edge or mark a line using a sharp pencil or scribe.
6. Reposition the square and repeat the check if needed.
7. Wipe the tool clean and store it safely after use.

⚠ Safety

- Keep fingers clear of sharp blade edges and scribes.
- Do not use a bent or damaged square for accurate marking.
- Secure the workpiece before marking or checking.
- Use a suitable marking tool and avoid excessive force.

Care & storage

- Keep the blade clean and free from rust.
- Store the square flat or in a protective holder to prevent bending.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
