Wi-Fi Router

Category: **Telecom & Networking** Type: **Short SOP** Priority: **Medium** 9 labs

Covers these lab items: Internet wifi setup; Modem/ router; Wifi; Wi-Fi systems

What it is used for

Use a Wi-Fi router to connect compatible devices to a local wireless network and, when configured, to the internet.

How to use

1. Place the router in a central, ventilated location away from moisture and heat.
2. Check the power adapter and network cables for damage.
3. Connect the internet or modem cable to the router's correct port.
4. Power on the router and wait for the status indicators to stabilize.
5. Open the router setup page or approved app using the manufacturer's instructions.
6. Set a strong Wi-Fi password and secure administrator credentials.
7. Connect a device and test network access before finishing setup.

⚠ Safety

- Use only the specified power adapter and voltage.
- Change default administrator credentials and use current security settings.
- Do not share Wi-Fi passwords with unauthorized users.
- Keep the router dry and disconnect power before cleaning cables or connectors.

Care & storage

- Keep ventilation openings clear and wipe the casing with a dry cloth.
- Install firmware updates from the manufacturer when appropriate and store setup details securely.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
