Pipe Wrench

Category: **Plumbing & Pipe Fitting** Type: **Short SOP** Priority: **Medium** 8 labs

Covers these lab items: Pipe wrench; Pipe Wrench BIS certified

What it is used for

Use a pipe wrench to grip and turn compatible pipes or threaded fittings during plumbing and pipe-fitting work.

How to use

1. Choose a pipe wrench size suitable for the pipe diameter and task.
2. Inspect the jaws, adjustment nut, frame, and handle for damage.
3. Adjust the jaws so they grip the pipe securely without excessive looseness.
4. Position the wrench on the pipe with enough clearance for a controlled turn.
5. Apply steady force in the intended direction and avoid sudden jerks.
6. Reposition the wrench as needed and inspect the fitting after turning.
7. Clean the wrench and store it after use.

⚠ Safety

- Do not use a pipe wrench on nuts or finished surfaces where jaw marks may cause damage.
- Keep hands clear of pinch points and slipping pipes.
- Do not use extension pipes or strike the wrench unless the manufacturer permits it.
- Secure the pipe and release system pressure before loosening pressurized fittings.

Care & storage

- Remove dirt and moisture from the jaws and frame after use.
- Store the wrench dry and check jaw teeth and adjustment parts regularly.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
