Full Body Harness

Category: **Safety & PPE** Type: **Short SOP** Priority: **Medium** 7 labs

Covers these lab items: Full body harness; Safety belt; Safety harness

What it is used for

Use a full body harness as part of an approved fall-protection system when working at height where fall protection is required.

How to use

1. Inspect the harness webbing, stitching, buckles, D-rings, and labels before each use.
2. Confirm the harness fits the user's size and is within its service life.
3. Put on the harness and fasten all buckles according to the manufacturer's instructions.
4. Adjust straps so the harness fits snugly without restricting movement or breathing.
5. Connect the designated attachment point to an approved compatible lanyard or fall-arrest system.
6. Verify the anchor point and system are approved and suitable for the task.
7. After use, inspect the harness and report any fall event or damage.

⚠ Safety

- Only trained users should use a harness as part of a fall-protection system.
- Never use a harness with cuts, damaged stitching, altered parts, or an unreadable label.
- Use an approved anchor and compatible fall-arrest equipment; a harness alone does not prevent a fall.
- Maintain a rescue plan and do not work at height without required protection.

Care & storage

- Store clean and dry away from sunlight, chemicals, heat, and sharp edges.
- Remove the harness from service after a fall or when inspection identifies damage.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
