Wood Saw

Category: **Hand Tools - Cutting & Shaping** Type: **Short SOP** Priority: **Medium** 7 labs

Covers these lab items: Crosscut Saw; Hand saw; Saw; Saw small size

What it is used for

Use a wood saw to cut timber or other suitable wood materials along a marked line during workshop or carpentry tasks.

How to use

1. Select a saw type and blade length suitable for the wood and cut.
2. Inspect the blade, teeth, handle, and fixing points for damage.
3. Mark the cutting line and secure the workpiece on a stable support.
4. Hold the saw firmly and begin with short, controlled strokes along the line.
5. Continue with steady strokes while keeping the blade aligned with the mark.
6. Keep the offcut supported and avoid pinching the blade as the cut finishes.
7. Clean the saw and store it with the blade protected.

⚠ Safety

- Wear safety glasses and keep hands clear of the cutting path.
- Clamp the workpiece securely instead of holding it close to the blade.
- Do not use a cracked handle or damaged blade.
- Keep bystanders clear and avoid forcing the saw through the wood.

Care & storage

- Remove sawdust and wipe the blade dry after use.
- Store the saw in a dry place with teeth covered or protected.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
