Hand Drill

Category: **Hand Tools - Cutting & Shaping** Type: **Short SOP** Priority: **Medium** 6 labs

Covers these lab items: Hand Drill; Hand Drill Machine; Hand Driller Kit

What it is used for

A hand drill is used to make holes in wood, plastic, metal, or other suitable materials with an appropriate bit. Select the bit and drilling method according to the material and task.

How to use

1. Inspect the drill, chuck, handle, and drill bit for damage.
2. Choose a suitable sharp bit and secure it firmly in the chuck.
3. Mark the hole location and clamp the workpiece securely.
4. Align the drill perpendicular to the surface unless the task requires another angle.
5. Apply steady pressure and rotate the handle smoothly while drilling.
6. Remove the bit carefully, clear debris, and clean the drill after use.

⚠ Safety

- Wear safety glasses and secure loose clothing and hair.
- Clamp the workpiece; never hold small pieces directly in your hand while drilling.
- Keep fingers away from the rotating bit and cutting area.
- Do not use damaged bits or force the drill excessively.

Care & storage

- Clean the drill and store it with bits in a dry, secure place.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
