Measuring Instrument

Category: **Measuring & Marking Tools** Type: **Short SOP** Priority: **Medium** 6 labs

Covers these lab items: Measuring appliances; Measuring equipment; Measuring Tools (ruler, scale, calipers)

What it is used for

Measuring instruments are used to determine dimensions, distances, thickness, or other physical quantities. Choose an instrument with suitable range and accuracy for the measurement.

How to use

1. Select the correct instrument for the quantity and required accuracy.
2. Inspect the instrument for damage, dirt, or worn measuring surfaces.
3. Check zero setting or calibration status before taking measurements.
4. Position the instrument correctly against or around the object.
5. Read the scale or display at the correct viewing angle.
6. Record the result with the correct unit and clean the instrument after use.

⚠ Safety

- Handle precision instruments carefully and avoid dropping or striking them.
- Do not force calipers or measuring jaws against the workpiece.
- Use instruments only within their specified measuring range.

Care & storage

- Clean and store instruments in a dry protective case; calibrate as scheduled.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
