Cable Tester

Category: **Telecom & Networking** Type: **Short SOP** Priority: **Medium** 5 labs

Covers these lab items: Cable testers, multimeters, and continuity testers; Lan Tester

What it is used for

A cable tester checks whether cable connections and conductors are correctly wired and continuous. Use the tester type suitable for the cable, such as Ethernet or telephone cable.

How to use

1. Inspect the tester, leads, adapters, and battery condition.
2. Identify the cable type and choose compatible tester ports or adapters.
3. Disconnect the cable from powered equipment before testing unless the tester is specifically designed otherwise.
4. Connect both ends of the cable to the correct tester ports.
5. Run the test and read the wiring, continuity, or fault indication.
6. Disconnect the cable and tester, then record any faults found.

⚠ Safety

- Never connect a basic cable tester to live mains wiring.
- Do not test cables connected to powered equipment unless the tester permits it.
- Keep connectors and hands dry, and replace damaged test leads.

Care & storage

- Keep connectors clean, replace weak batteries, and store the tester in its protective case.
