Hospital Bed

Category: **Medical, Healthcare & First Aid** Type: **Short SOP** Priority: **Medium** 5 labs

Covers these lab items: Bed(ICU); Hospital Bed; Hospital bed or adjustable bed for home care simulation; ICU Bed with Mattress

What it is used for

A hospital bed supports patients and may provide adjustable height, backrest, and side rails for care and positioning. Operate the bed according to the patient's needs and the manufacturer's instructions.

How to use

1. Inspect the bed frame, mattress, wheels, brakes, controls, and side rails.
2. Explain the movement to the patient and check that lines or tubes will not be pulled.
3. Lock the wheels before transferring or positioning the patient.
4. Use the controls to adjust height or backrest slowly while observing the patient.
5. Raise side rails when indicated by the care plan and facility procedure.
6. After use, return the bed to the required safe position and clean contact surfaces.

⚠ Safety

- Use brakes during transfers and whenever the bed must remain stationary.
- Keep hands, feet, and bedding clear of moving joints and mechanisms.
- Do not leave a patient at risk of falling unattended; follow the care plan for rails.
- Only trained staff should use powered adjustments and patient-lifting features.

Care & storage

- Clean and disinfect contact surfaces according to facility protocol and report mechanical or electrical faults.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
