Hydrometer

Category: **Automotive** Type: **Short SOP** Priority: **Medium** 5 labs

Covers these lab items: Hydrometer

What it is used for

A hydrometer measures the relative density of a liquid, such as battery electrolyte, when the instrument is designed for that liquid. Use it only with the correct fluid type and manufacturer instructions.

How to use

1. Confirm that the hydrometer is suitable for the liquid being tested.
2. Inspect the body, scale, float, and seals for cracks or damage.
3. Wear the required protective equipment and prepare a clean sampling area.
4. Draw the liquid into the hydrometer as instructed, avoiding bubbles and spills.
5. Allow the float to settle and read the scale at eye level.
6. Return or dispose of the sample according to the procedure and clean the instrument.

⚠ Safety

- For battery electrolyte, wear chemical-resistant gloves and eye protection.
- Avoid skin or eye contact with corrosive liquids and follow the safety data instructions.
- Do not use a damaged hydrometer or mix samples between containers.
- Never return a contaminated sample to the original container.

Care & storage

- Rinse or clean the hydrometer as specified, dry it appropriately, and store it safely.
