Petri Dish

Category: **Laboratory Instruments & Glassware** Type: **Short SOP** Priority: **Medium**

5 labs

Covers these lab items: Culture dishes; Petri dish; Petri dish (80X70 mm)

What it is used for

A Petri dish is a shallow dish used to hold samples or culture microorganisms in laboratory work. Use sterile dishes when required by the test procedure.

How to use

1. Inspect the dish for cracks, chips, contamination, or damaged lids.
2. Select a clean or sterile dish according to the laboratory procedure.
3. Label the dish before adding the sample or culture medium.
4. Open the lid only as much and for as long as necessary to reduce contamination.
5. Add the sample using the approved laboratory method and close the lid carefully.
6. Dispose of used dishes or clean reusable ones according to laboratory protocol.

⚠ Safety

- Wear suitable laboratory PPE and follow the required aseptic technique.
- Do not touch sterile inner surfaces with unclean hands or tools.
- Treat used culture dishes as potentially infectious and dispose of them correctly.

Care & storage

- Keep clean dishes covered and store them in a dry, protected area.
