Pulse Oximeter

Category: **Medical, Healthcare & First Aid** Type: **Short SOP** Priority: **Medium** 5 labs

Covers these lab items: Pulse Oximeter; Pulse Oximeter (Finger)

What it is used for

A finger pulse oximeter estimates blood oxygen saturation (SpO2) and pulse rate. Use it as a screening aid, not as a replacement for clinical assessment.

How to use

1. Check the device, display, battery, and finger sensor for cleanliness and damage.
2. Ask the person to rest briefly and keep the hand warm and still.
3. Remove nail polish or artificial nails if they interfere with the sensor reading.
4. Place the device on the finger as instructed and keep the hand relaxed.
5. Wait for a stable reading and note SpO2 and pulse rate.
6. Remove the device, clean it according to instructions, and record results if required.

⚠ Safety

- Do not rely on one reading alone if symptoms or clinical concerns are present.
- Seek urgent medical help for severe breathlessness, blue lips, confusion, or other serious symptoms.
- Cold fingers, movement, poor circulation, and nail products can affect accuracy.

Care & storage

- Clean the sensor between users and store the device in a dry, safe place.
