Solar Lantern

Category: **Solar, Power & Energy** Type: **Short SOP** Priority: **Medium** 5 labs

Covers these lab items: Lantern; Light and heat sources (solar lanterns, fire starters) for extended field visits; Solar lantern; Solar torch

What it is used for

A solar lantern uses stored solar energy to provide light without a direct mains connection. Charge and operate it according to the manufacturer's instructions.

How to use

1. Inspect the lantern, solar panel, charging port, battery compartment, and switch.
2. Place the solar panel in direct sunlight where it is not shaded.
3. Allow charging for the time recommended by the manufacturer.
4. Switch on the lantern and select the required brightness setting.
5. Check that the light works and the lantern remains stable during use.
6. Switch it off after use and store it in a dry, secure place.

⚠ Safety

- Do not use a lantern with a swollen battery, cracked casing, or damaged wiring.
- Keep the lantern and charging connections away from water unless rated for wet conditions.
- Do not open or puncture the battery compartment.

Care & storage

- Keep the solar panel clean and store the lantern away from excessive heat and moisture.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
