Test Tube

Category: **Laboratory Instruments & Glassware** Type: **Short SOP** Priority: **Medium**

5 labs

Covers these lab items: Culture tubes; Glass tubes

What it is used for

A test tube holds, mixes, or heats small quantities of laboratory materials when suitable for the procedure. Choose a tube made from material compatible with the sample and temperature.

How to use

1. Inspect the test tube for cracks, chips, contamination, or damaged rims.
2. Select a clean tube suitable for the substance and intended procedure.
3. Label the tube and place it securely in a rack before filling.
4. Add the sample carefully, leaving sufficient space to prevent splashing.
5. If heating is required, use suitable glassware and heat it according to laboratory instructions.
6. After use, dispose of contents correctly and clean or discard the tube according to protocol.

⚠ Safety

- Wear suitable eye protection and laboratory PPE.
- Never point an open test tube toward yourself or another person.
- Do not heat a sealed test tube or use cracked glassware.
- Use a suitable holder when handling hot test tubes.

Care & storage

- Wash reusable tubes, allow them to dry, and store them upright in a rack.
