Cable Cutter

Category: **Hand Tools - Cutting & Shaping** Type: **Short SOP** Priority: **Medium** 4 labs

Covers these lab items: Cable cutter

What it is used for

A cable cutter is designed to cut electrical or communication cables cleanly with suitable cutting jaws. Select a cutter rated for the cable material and size.

How to use

1. Inspect the cutter jaws, handles, pivot, and insulation for damage.
2. Confirm the cable type and choose a cutter rated for its size and material.
3. Ensure the cable is de-energized and isolated before cutting electrical conductors.
4. Position the cable fully within the cutting jaws and keep it steady.
5. Squeeze the handles smoothly to complete the cut without twisting the tool.
6. Inspect the cut end, clean the cutter, and store it safely.

⚠ Safety

- Never cut an energized cable unless using a specifically rated method under authorized procedures.
- Do not use ordinary cable cutters on steel wire rope unless designed for it.
- Keep fingers away from the jaws and cutting area.
- Do not use cutters with damaged insulation or cracked handles for electrical work.

Care & storage

- Wipe the jaws clean, lubricate the pivot if needed, and store the cutter dry.
