Chain Wrench

Category: **Hand Tools - Fastening & Gripping** Type: **Short SOP** Priority: **Medium** 4 labs

Covers these lab items: Chain wrench; Chain wrenches

What it is used for

To grip and turn large pipes or cylindrical fittings using a chain wrench. To apply controlled torque while minimizing damage to the workpiece.

Main parts

- Handle
- Chain
- Chain pins or links
- Hook or gripping teeth
- Adjustment or locking mechanism

Before you start

1. Confirm that the wrench size suits the pipe or fitting.
2. Inspect the chain, links, pins, and handle for damage.
3. Clean excess oil or grease from the gripping area where safe to do so.
4. Secure the pipe or fitting against movement.

How to use

1. Wrap the chain around the pipe or fitting.
2. Engage the chain securely with the wrench head.
3. Position the handle for a controlled pull.
4. Apply force gradually in the required direction.
5. Reposition the chain if a new grip is needed.
6. Release the chain carefully after the fitting is secure.

⚠ Safety

- Keep hands clear of pinch points in the chain.
- Do not use extension bars unless explicitly approved by the manufacturer.
- Do not use a damaged or stretched chain.
- Stand in a stable position and avoid sudden force.

Care & storage

- Clean the chain and gripping teeth after use.
- Inspect links, pins, and handle regularly.

- Apply suitable lubricant to designated moving points.
- Store in a dry location.

Common mistakes to avoid

- Using the wrong wrench size.
- Applying sudden excessive force.
- Gripping a pipe that is not secured.
- Using a damaged chain or handle.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
