Protractor

Category: **Measuring & Marking Tools** Type: **Short SOP** Priority: **Medium** 4 labs

Covers these lab items: Protractor

What it is used for

To measure and draw angles using a protractor. To mark accurate angles by aligning the baseline and reading the correct scale.

Main parts

- Protractor body
- Angle scale
- Centre point
- Baseline
- Reference markings

Before you start

1. Choose a protractor with a suitable range and readable markings.
2. Check for cracks or worn scale markings.
3. Place the drawing or workpiece on a flat surface.
4. Keep a pencil or marking tool ready.

How to use

1. Mark the vertex of the required angle.
2. Align the protractor centre with the vertex.
3. Place the baseline along one arm of the angle.
4. Read the correct scale from the zero aligned with the baseline.
5. Mark the required angle value.
6. Remove the protractor and draw the second arm through the mark.
7. Check the angle and measurement units.

⚠ Safety

- Handle sharp marking tools carefully.
- Keep the protractor away from heat that may distort it.
- Avoid using a damaged or unclear scale.

Care & storage

- Wipe the protractor clean after use.
- Store it flat in a protective place.

- Keep the scale markings readable.

Common mistakes to avoid

- Aligning the centre away from the vertex.
- Reading the wrong scale.
- Allowing the protractor to move while marking.
- Confusing degrees with other measurement units.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
