Torch

Category: **Electrical & Electronic Components & Kits** Type: **Short SOP** Priority: **Medium**

4 labs

Covers these lab items: Flashlights; Torch; Torch Light

What it is used for

To provide portable illumination using a torch or flashlight. To improve visibility in dim areas while maintaining safe battery and electrical handling.

Main parts

- Housing and grip
- Lens or light window
- LED or bulb
- Power switch
- Battery or rechargeable cell
- Charging port, if fitted

Before you start

1. Check the torch body, lens, switch, and battery compartment for damage.
2. Confirm that batteries are correctly fitted and charged.
3. Ensure the lens is clean and the beam works properly.
4. Select a torch suitable for the environment and task.

How to use

1. Switch on the torch using its power control.
2. Aim the beam at the area that needs illumination.
3. Adjust brightness or beam focus if the model supports it.
4. Use the torch to inspect the area without touching hazardous components.
5. Switch it off when no longer needed.
6. Recharge or replace batteries according to the instructions.

⚠ Safety

- Do not shine a high-intensity beam directly into anyone's eyes.
- Keep the torch away from water unless it is rated for wet conditions.
- Use only compatible batteries and chargers.
- Do not use a torch with leaking batteries or damaged wiring.

Care & storage

- Wipe the lens and housing clean.

- Remove batteries for long-term storage if recommended.
- Recharge according to the manufacturer's instructions.
- Store in a dry, secure place.

Common mistakes to avoid

- Using the wrong battery type or polarity.
- Leaving the torch switched on until the battery drains.
- Using a damaged torch in a hazardous environment.
- Pointing the beam into someone's eyes.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
