Drenching Bottle

Category: **Animal Husbandry & Dairy** Type: **Short SOP** Priority: **Medium** 3 labs

Covers these lab items: Drenching bottles

What it is used for

To administer an oral drench to livestock using a suitable drenching bottle when directed by a veterinarian or approved animal-care procedure. To deliver the prescribed liquid carefully and reduce the risk of choking or aspiration.

Main parts

- Bottle body
- Graduated markings, if fitted
- Neck or nozzle
- Cap
- Dose measuring device, if separate

Before you start

1. Confirm the animal, prescribed product, dose, and route with the veterinary instructions.
2. Check the product label, expiry date, and bottle cleanliness.
3. Measure the prescribed amount using an appropriate measuring device.
4. Ensure the animal is calm and restrained by a trained handler.
5. Inspect the bottle and nozzle for cracks, blockage, or sharp edges.

How to use

1. Prepare the prescribed liquid according to its label and veterinary directions.
2. Hold the bottle securely and position the animal's head naturally.
3. Insert the nozzle carefully at the side of the mouth as directed by the product procedure.
4. Administer the liquid slowly in small amounts, allowing the animal to swallow.
5. Pause immediately if coughing, choking, or breathing difficulty occurs.
6. Check the animal's response and follow the required aftercare.
7. Clean the bottle and record administration according to the farm procedure.

⚠ Safety

- Use only the prescribed product and dose.
- Never force large amounts of liquid into the animal's mouth.
- Do not tilt the animal's head excessively or block its breathing.
- Seek veterinary advice if the animal cannot swallow or shows distress.

Care & storage

- Wash and dry the bottle after use if it is reusable.
- Keep products in their original labelled containers where possible.
- Inspect the nozzle and cap regularly.
- Store according to the product label and keep away from children.

Common mistakes to avoid

- Using an incorrect dose or product.
- Drenching too quickly and risking aspiration.
- Forcing the animal's head into an unsafe position.
- Reusing a contaminated bottle without cleaning.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
