Grain Sampling Probe

Category: **Agriculture & Gardening** Type: **Short SOP** Priority: **Medium** 3 labs

Covers these lab items: Parkhi (Bag trier)

What it is used for

To collect representative grain samples from bags or bulk grain for quality inspection and testing.

How to handle

- Inspect the probe for damage, corrosion, sharp edges, and cleanliness before use.
- Wear suitable gloves and follow the sampling plan to select representative bags or sampling locations.
- Insert the probe carefully into the grain, collect the sample, and withdraw it without spilling or contaminating the material.
- Transfer the sample to a clean, labelled container and record the source, date, and sample identification.
- Clean and dry the probe after sampling, especially before sampling a different grain lot.

Storage

- Store clean and dry in a designated tool rack or protective case.
- Cover sharp edges and keep the probe away from moisture and contamination.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
