Temperature Indicator

Category: **Electrical & Electronic Test Instruments** Type: **Short SOP** Priority: **Medium**

3 labs

Covers these lab items: Digital electronic temperature indicator

What it is used for

To display or monitor temperature measured by a compatible sensor in equipment, processes, or laboratory setups.

How to handle

- Inspect the indicator, display, terminals, sensor, and cables for damage before use.
- Confirm that the sensor type, temperature range, input configuration, and power supply match the indicator specifications.
- Isolate power before wiring the sensor or changing electrical connections.
- Install the sensor at the intended measurement point and configure units, limits, and alarm settings as required.
- Compare the displayed value with a suitable reference when accuracy matters, and disconnect power before maintenance.

Storage

- Store in a clean, dry location protected from dust, moisture, and impact.
- Keep sensors and leads labelled and avoid bending cables sharply or damaging probe tips.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
